

The SmartBubble Difference

Do you want to save water, save money and save on maintenance time too? Do you want durability, quality and value for money in a solar blanket? How about maximum water saving and heat retention capabilities? Only want to buy Australian?

Insist on SmartBubble By ABGAL.

What is SmartBubble?

SmartBubble is a revolutionary new bubble style. Guaranteed to be thicker than other leading brands, the special moulding process ensures a stronger bubble with no weak points. A bigger bubble, its unique shape means that it is also around 20% flatter than other styles, making it more compact to store.

Can I see the difference?

You can easily see how SmartBubble differs in appearance from traditional bubbles. The bubble is wider and thicker, with a much lower profile. It is specially moulded so that 2/3 of the total material thickness faces the water surface, to give extra strength where it is needed most.

There are no weak points, and no stretching - simply a guaranteed even thickness throughout the bubble wall.

Environmentally Friendly

Fully recyclable, offcuts can be recycled at any plant with the capacity to process LDPE 4.

Its flatter profile also means that it takes up around 10% less space than a traditional blanket. This means less packaging, more blankets per truckload and less carbon emissions.

Stop up to 99.84% of evaporation

SmartBubble has been independently tested and proven to stop up to 99.84% of water loss caused by evaporation. All SmartBubble Oasis covers carry the Smart Approved WaterMark, and exceeds the industry standard.

The translucent blanket draws heat from the sun, penetrating the water and raising temperatures by up to 8 degrees. Impressive insulative qualities trap the heat within the water, keeping pool water warmer, for longer.

Swim for longer

SmartBubble is ideally shaped to draw the heat of the sun's rays, deep into the pool water. The blanket effectively traps the heat in, keeping your water warmer for several weeks either side of the traditional 'swimming season' - often up to 8 degrees.

Made Smart - to Outlast!

With extra UV inhibitors, and specially formulated to resist salt, sun and other pool nasties, SmartBubble comes in a range of thicknesses (microns) to suit individual requirements.

A minimum 3 year pro-rata warranty gives peace of mind, knowing that your new solar blanket will not disintegrate within 12 months.

- * 250micron - 3 year pro-rata warranty
- * 400micron - 5 year pro-rata warranty
- * 500micron - 8 year pro-rata warranty

Australian Made, Australian Owned

A family owned business, ABGAL Liners & Covers are Australia's largest manufacturer of premium liners and covers... and have been in the business since 1976!
